

Dhaiwat Pandya

Software Engineer with 8 years of experience

Bengaluru, India | dhaiwatpandya@gmail.com | dhaiwat.com | github.com/Dhaiwat10 | x.com/dhaiwat

WORK EXPERIENCE

Solutions Engineer, ENS Labs (~\$10m ARR, ~700k users) Jan 26–Present

- Widely considered to be one of the most vital pieces of Ethereum infrastructure.
- I worked here as the primary integrations engineer for ENS v2.
- Helped some of the biggest crypto products including Uniswap, MetaMask, Kraken, and PayPal with their ENS v2 upgrade.
- Opened PRs for 50+ repositories across more than 5 different languages and frameworks.

Independent Research Feb 25–Dec 25

- Researched and built experiments primarily around blockchain architectures, Ethereum, Solana, and new payment schemes like x402.
- Spent time researching and experimenting with sovereign AI and its intersection with crypto.

Software Engineer & Developer Relations, Fuel Labs (Raised \$85m) Nov 22–Jan 25

- Fuel was the first Stage-2 rollup built on Ethereum. Fuel also built FuelVM - the first registered-based, UTXO-based execution environment capable of parallel Ethereum transactions, native account abstraction and much more.
- By the time Fuel launched, it was by far one of the most performant and economic rollups live on Ethereum.
- I contributed across the entire engineering stack at github.com/fuellabs and helped figure out the developer marketing strategy post-launch.

Developer Relations, Ankr Apr 22–Sep 22

- Ankr is one of the largest crypto infrastructure companies. I worked on refining Ankr's developer-facing products - including documentation, new SDKs, educational content, hosting events, etc.

Lead Frontend Engineer, Mazury Labs (Raised \$1.5m) Dec 21–Apr 22

- I was the second hire at Mazury. We built a product around onchain credentials.

Fullstack Engineer, Gitcoin DAO Mar 21–Dec 21

- Gitcoin is a platform and community that helps fund public goods, especially open-source software and projects in the Ethereum ecosystem.
- I was a part of the Gitcoin DAO's experimental workstream called the Moonshot Collective - where we built a ton of prototypes around up and coming onchain primitives.

Backend Engineer, Creativice Mar 21–Dec 21

Fullstack Engineer, Open Consulting Group Apr 19–Mar 20

Fullstack Software Engineer, Freelance Jul 18–Dec 21

EDUCATION

Gujarat Technological University 18–22

Bachelor of Engineering in Computer Science

PROJECTS

Smart Mute for Twitter (<https://github.com/Dhaiwat10/smart-mute>)

A Chrome extension that helps you curate your Twitter feed by hiding whole topics on your feed semantically. Built using Jev

Polymarket AI Agent Arena (<https://github.com/dhaiwat10/polymarket-ai>)

An experiment to see how different models go about analysing and trading in the same set of Polymarket prediction markets.

phala-verifiable-ai (<https://github.com/Dhaiwat10/phala-verifiable-ai>)

Verifiable AI chat app built with Phala confidential computing. Each AI response includes cryptographic verification, ensuring the integrity and authenticity of the generated content.

react-link-preview (<https://github.com/Dhaiwat10/react-link-preview>)

UI library for rendering customizable link previews. 130k+ downloads.

x402-sovereign (<https://github.com/Dhaiwat10/x402-sovereign>)

The fastest way to get started with a self-hosted x402 (agentic payments) facilitator.

SKILLS

Engineering: React, TypeScript, Rust, Python, Blockchain Engineering
Developer Relations: Educational Content Creation, Developer Marketing
